

Most Chicago Public School (CPS) Students Made Sufficient Academic Progress Between Spring 2014 and Spring 2015

Student growth rating measures how much students learn in a year. The rating is the school...s rank in CPS compared to schools with similar pre-test scores.
An AVERAGE score means the school is at the CPS average in terms of growth.

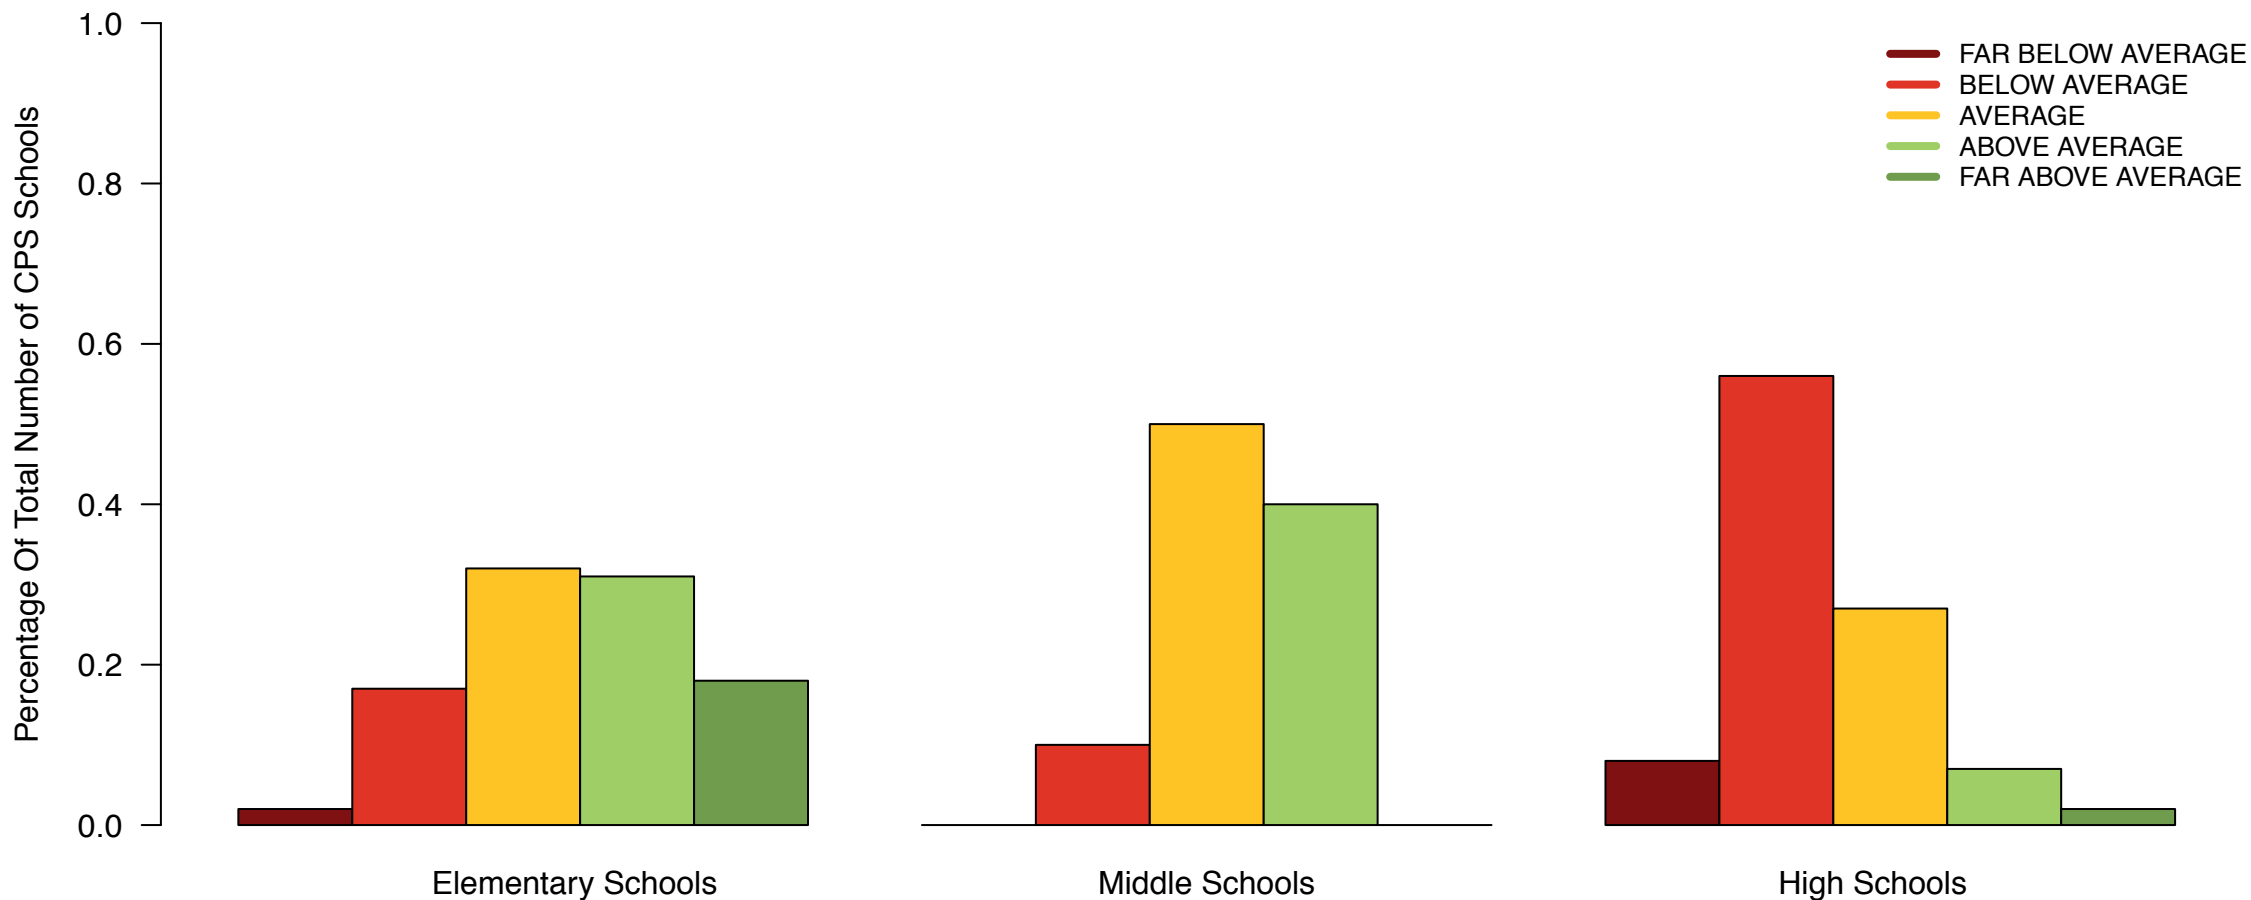

CPS Elementary Schools (Appear) To Be Leading the Way

Of the 592 schools that recorded student growth rating during the 2015 school year, 456 were elementary schools, 10 were middle schools, and 126 were high schools. Such a discrepancy requires that we examine student growth as a percentage of total number of schools in each category.

Accounting for Number of Schools Reveals Low Student Growth in CPS High Schools

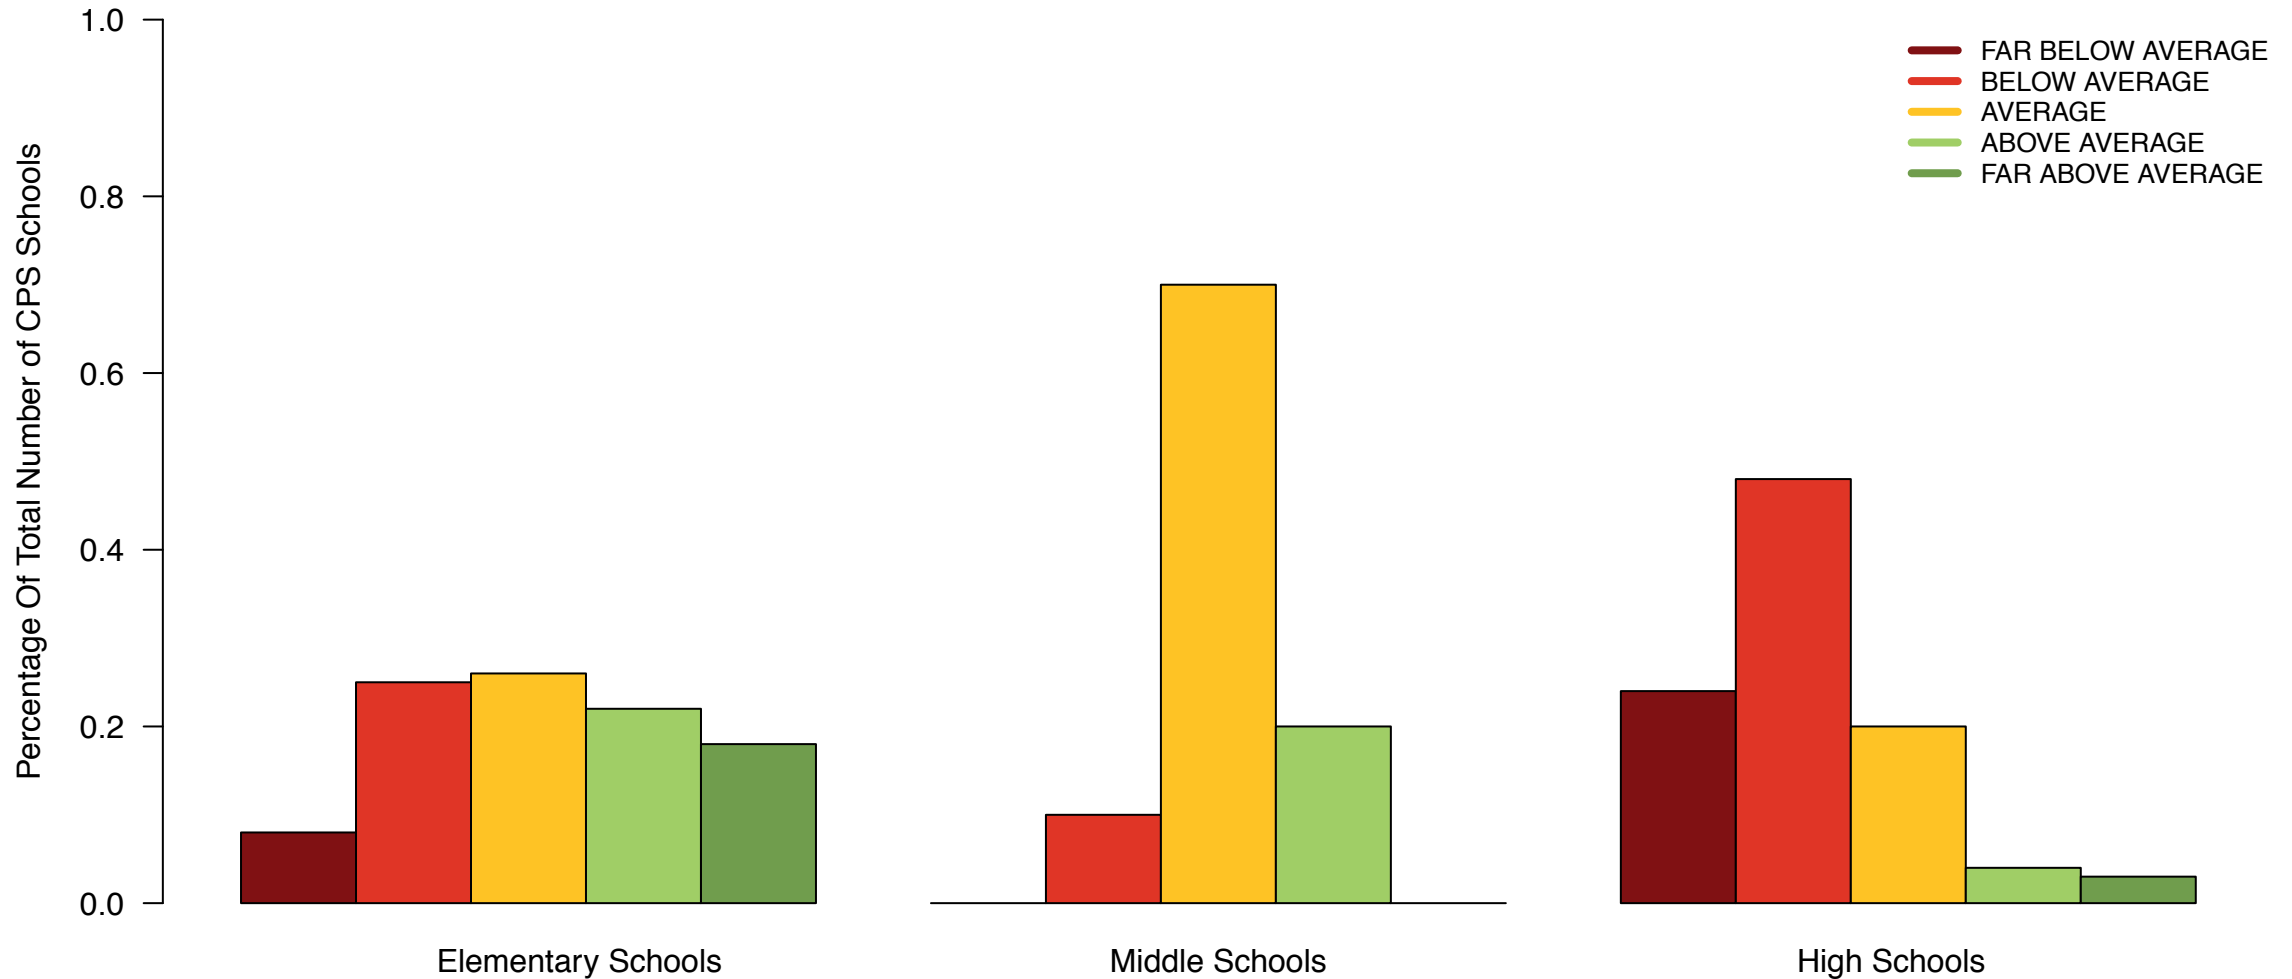

36% of CPS high schools observed at least average student growth; yet, the remaining 64% observed below and far below average student growth. This situation is not occurring elsewhere as a majority of CPS elementary and middle schools observed average student growth.

Different Metric, Same Outlook:

72% of CPS High Schools Are Not Meeting Average Grade Level Standards

Student attainment measures how well students score on ACT EPAS compared to the national EPAS average score.
An AVERAGE rating means the school is performing at the national average.

South of the Stevenson Expressway:

Abundance of 2015 CPS High Schools With Student Growth Ratings Below Average

Communities living south of the Stevenson Expressway (Interstate 55) will only find 1 high school who's student growth rating was above average.
